Fast fashion may look cheap, stylish, and convenient â€” but its real cost is paid by the planet. The fashion industry is one of the most polluting in the world, responsible for 10% of global carbon emissions and 20% of wastewater. Fast fashion's reliance on cheap, synthetic materials and rapid production cycles contributes to environmental degradation and waste. The industry's carbon footprint is significant, with major brands like H&M, Zara, and Primark facing scrutiny for their environmental impact. The fashion industry's water usage is also a major concern, with some brands using up to 2,700 liters of water to produce a single cotton t-shirt. The industry's waste problem is also severe, with an estimated 92 million tons of textile waste generated globally each year. The fashion industry's environmental impact is a complex issue that requires a multi-faceted approach to address. This includes reducing carbon emissions, improving water efficiency, and implementing sustainable waste management practices.
